About Us

Founded in 2013, SigmaTech has been a pioneer in the surgical instrument industry. With a legacy spanning over 10 years, we have consistently been at the forefront of surgical instrument innovation and manufacturing. Our commitment to excellence is deeply rooted in our history, and it's reflected in every instrument we produce.

Central to our promise of quality is the material we use. We exclusively utilize stainless steel that meets the latest version of the Standard Specification for Wrought Stainless Steels for Surgical Instruments, the ASTM standard F-899. This high-grade stainless steel is sourced only from renowned suppliers in Germany and Japan, ensuring the durability, precision, and safety of our instruments.

Our dedication to quality doesn't stop at materials. We are proud to be FDA approved, allowing us to provide our top-tier surgical tools to the medical community in the United States. Furthermore, our products and processes are compliant with the latest relevant ISO standards, a testament to our unwavering commitment to international quality benchmarks.

A significant testament to our reputation in the industry is our role as a supplier to the main distributors for Medline Industries, LP in the USA. This partnership underscores our position as a trusted and reliable provider of surgical instruments on a global scale.

Every instrument that bears the SigmaTech logo undergoes rigorous testing and quality checks, ensuring it not only meets but exceeds the expectations of the medical professionals who rely on them. Our legacy, combined with our dedication to quality assurance, positions us as a trusted partner in the medical community worldwide.

Mission Statement

At SigmaTech Healthcare, our mission is to empower medical professionals with the highest quality surgical instruments, ensuring precision, safety, and the best patient outcomes. We believe in the power of technology combined with human skill, and our instruments are a testament to this synergy.

Vision Statement

Our vision is to revolutionize surgical procedures by continuously innovating and providing the medical community with tools that are a blend of traditional craftsmanship and modern technology. We aim to be the preferred choice for surgeons across the globe, setting new standards in surgical care.

At SigmaTech Healthcare, our core values are the pillars that uphold our commitment to excellence, guiding every decision we make and every product we craft. These values reflect our dedication to the medical community and the patients they serve:

Integrity:

We believe in conducting our business with the highest ethical standards. Every instrument we produce is a testament to our unwavering commitment to quality and honesty.

Innovation:

The medical field is ever-evolving, and so are we. We continuously invest in research and development to ensure our instruments are at the cutting edge of surgical technology.

Patient-Centric:

At the heart of our operations is the well-being of patients. We understand the critical role our instruments play in surgeries, and we are dedicated to ensuring the best outcomes for patients.

Collaboration:

We value the insights and feedback from the medical community. By fostering close relationships with surgeons and healthcare professionals, we ensure our products meet real-world needs.

Sustainability:

We are committed to environmentally friendly practices. From sourcing materials to manufacturing, we strive to minimize our carbon footprint and promote sustainability in the medical industry.

Excellence:

We set high standards for ourselves, and we continuously strive to exceed them. From craftsmanship to customer service, we aim for nothing less than the best.

Accountability:

We take responsibility for our actions and products. If an instrument doesn't meet our rigorous standards, we seek to rectify it immediately, ensuring our customers always receive the best.

By staying true to these core values, we aim to not only provide the best surgical instruments but also to make a positive impact on the medical community and the world at large.
